

CLALLAM TRANSIT SYSTEM

CTS provides bike racks on all routes. Route 123-"The Strait Shot," busses are equipped with underfloor storage for bicycles. Simply let the driver know you need to load or unload a bicycle and they can help assist you on how to properly secure your bicycle.

Please have detachable bags, bottles, pumps, trailers, and any other items attached to your bicycle removed before the bus arrives for quick loading. We recommend carrying a bike lock with you.

Rack and interior space is limited and is on a first come, first served basis. Foot passengers and passengers with ADA mobility devices take priority seating at all times. Passengers traveling with bicycles are not guaranteed space on the bike rack, even when returning to their point of origin.

**WE LOOK FORWARD
TO RIDING WITH YOU!**

WANT TO KNOW MORE?

Great News!

Bike Lockers are now available at the Gateway Transit Center, Forks Transit Center, Sequim Transit Center, and Owl Creek (Kitchen-Dick Road and Hwy 101). Visit our website for the Bike Locker Agreement and application. Lockers at the Gateway Transit Center in Port Angeles may be reserved via the Movatic app. Download the app: www.movatic.co.

Make your cycling trip more enjoyable by checking out the CTS schedule for easy guidelines to find the time-point closest to you!

BRING YOUR BICYCLE ON THE BUS

**CLALLAM TRANSIT
SYSTEM**

REV. FEBRUARY 2023

BRING YOUR BICYCLE ON THE BUS

The Rules:

1. Bike racks are available on all CTS busses. Availability is based on a first come, first served basis. Additional space is available in the ADA area located inside the bus.

- **Please note: Foot passengers and passengers with ADA mobility devices have priority seating at "all times" during trips and it may be required to remove your bike if ADA seating is needed.**
- **Be prepared to secure your bike at or near the bus stop if space is not available.**

2. Bikes may be loaded/unloaded at any bus stop.

3. You must be physically able to load/unload your own bike. Drivers can give verbal instructions but cannot assist with loading or unloading bicycles.

4. Conventional bikes that do not securely fit on the bike rack due to size, style, shape or design, **cannot** be transported alternately inside the bus.

5. Electric powered bikes are allowed, provided they can be placed securely on the bike rack or if space is available inside the bus.

- **Bikes weighing over 55 lbs. are not allowed.**

6. Tandem and combustible fuel powered bikes **ARE NOT** allowed.

Loading Your Bicycle:

1. Before loading your bicycle onto the rack, all items that may interfere with mounting or could fall off during the trip need to be removed (bags, pumps, bottles, etc). Ensure that items (child carriers, etc.) do not block the driver's vision.

2. As the bus nears the stop, have your bike ready for loading. When the bus stops, inform the driver you are using the bike rack and quickly load your bicycle. Allow passengers de-boarding to remove their bicycles first.

3. For your safety, always load your bicycle from the curb or directly in front of the bus. **NEVER** load a bike from the traffic side.

4. With one hand, grip the rack latch release (in the center of the rack) to lower the rack from the raised position. Lift the bike onto the **forward most** spot, placing the front tire into the wheel well of the rack. Swing the support arm over the front tire and release the tension to secure the bike to the rack. (Some racks have arms with buttons that must be pushed down to release the arm.)

- **See Example A and B**

5. Board the bus and keep an eye on your bicycle for the duration of your trip.

Unloading Your Bicycle:

1. When approaching your stop, inform the driver you will be unloading a bicycle.

- **For your safety, exit from the front door of the bus, unless the driver instructs you otherwise.**

2. To remove the bike, reverse step 4 in the loading instructions.

3. If the rack is empty, please secure the rack back into the raised position.

4. Move quickly away from the bus to the sidewalk or shoulder and let the driver know it is safe for the bus to leave.

Example A:

Bike placed in forward most spot with front tire in the wheel well.

Example B:

Support arm placed over front tire and tension released to ensure bike is secure.
